Report on Medical Certification of Cause of Death 2015

REPORT ON MEDICAL CERTIFICATION OF CAUSE OF DEATH 2015

OFFICE OF THE REGISTRAR GENERAL, INDIA
GOVERNMENT OF INDIA,
MINISTRY OF HOME AFFAIRS,
VITAL STATISTICS DIVISION, R.K. PURAM, NEW DELHI

Preface

This Report for the year 2015 is the forty second in the series of the publication presenting statistics on causes of death obtained through the Civil Registration System under the Registration of Births and Deaths Act, 1969. Section 10(2) of the Act empowers the State Government to enforce the provision relating to medical certification of cause of death in specified areas taking into consideration the availability of medical facilities. Section 10(3) of the Act provides for issuing a certificate of the cause of death by the medical practitioner who has attended to the deceased at the time of death. At present, the scheme has been made applicable to limited areas and selected hospitals.

2. In the Report, data on medically certified deaths received from 33 States/UTs has been tabulated in conformity with the International Classification of Diseases (ICD) - Tenth Revision (1993). The statistics on causes of death have been presented, cross tabulating them by age and sex. The time series data on medically certified deaths by major cause groups for the previous years have also been added. The Report intends to maintain the continuity in the time series of data on causes of death under Medical Certification of Cause of Death (MCCD) which is of immense use to health planners and epidemiologists.

3. I take this opportunity to express my sincere gratitude to the State Governments and Union Territory Administrations and, specially, the Chief Registrars of Births & Deaths for furnishing the data, on the basis of which the Report has become possible. I am thankful to each one of them for their cooperation. I am hopeful for the similar response from other states and, overall, more vigorous implementation of the provisions on Medical Certification of Cause of Death in future, shall help reduce the time gap and establish this as a reliable source of information on the causes of deaths for the country.

4. The Report has been prepared by the officers and staff of the MCCD Unit of the Vital Statistics Division of this office. I must record my appreciation for the efforts put in by Shri. Kameshwar Ojha, Additional Registrar General, Shri Manoj Kumar,Deputy Registrar General, Shri R. B Singh, Senior Research Officer, Shri Pradeep Kumar Negi Assistant Director and Shri Surendra Singh Manral DEO GR-B who have been involved in the preparation of this report.

Executive Summary

Reliable cause-specific mortality statistics is required on a regular basis by Administrators, Policy Planners, Researchers and other Professionals for evidence-based decision-making with regard to resource allocation, monitoring of indicators, identifying the priorities for programs and other related activities in the area of Public Health. Keeping this in view, the scheme of *Medical Certification of Cause of Death (MCCD)* was introduced in the country under the provisions of Registration of Births and Deaths (RBD) Act, 1969. Since then, it has been operational in the country, but with varying levels of efficiency across the States/Union Territories. Under the scheme, the Office of the Registrar General, India (ORGI) obtains data on medically certified deaths as collected, compiled and tabulated by the Offices of the Chief Registrars of Births and Deaths of the States/UTs.

Methodology: The necessary data is collected in the prescribed forms (Form 4 for Hospital deaths and Form 4A for Non-institutional deaths). Both these forms have been designed by World Health Organization (WHO). The forms are filled-up by the medical professionals attending to the deceased at the time of terminal illness. Thereafter, these forms are to be sent to the concerned Registrars of Births and Deaths for onward transmission to the Chief Registrar Office for tabulation as per the National List of Causes of Death based on Tenth Revision of International Classification of Disease (ICD-10). The States/UTs subsequently send it to the Office of RGI in the form of Statistical Table-9 for consolidation at the national level.

Scope of the report: The report on MCCD-2015, is based upon 11,83,052 total medically certified deaths (Male: 7,36,882 and Female: 4,46,170) accounting for 22.0 per cent of total registered deaths in respect of 33 States/UTs who supplied data for the report. As mentioned above, owing to different levels of efficiency of medical certification across the States/UTs, the number of deaths reported therein may lack the representative character in the strict sense, however, it may be sufficient to throw some valuable insights into deaths by various cause groups and their gravity.

Findings: Overall:

- Following are eight leading cause-groups of deaths constituting around 88.0 per cent of total medically certified cause of deaths:
  - *Diseases of Circulatory System (33.2 per cent)*
  - *Certain Infectious and Parasitic Diseases (11.0 per cent)*
  - *Diseases of Respiratory System (9.0 per cent)*
  - *Certain Conditions Originating in the Perinatal Period 6.6 per cent)*
  - *Injury, Poisoning and Certain other Consequences of External Causes (6.2 per cent).*
  - *Neoplasm (5.3 per cent)*
  - *Diseases of Digestive System(4.4 per cent)*
  - *Symptoms Signs & Abnormal Clinical Findings* ***Not Elsewhere Classified*** *(12.2 per cent)*

- Among the "Diseases of Circulatory System" deaths, Ischemic Heart Diseases (IHD) and the Diseases of Pulmonary Circulation and Other Forms of Heart diseases account for 26.9 and 45.3 per cent deaths respectively.

- The major Group *"Certain Infectious and Parasitic Diseases"* which is the **second** leading cause of death is mainly constituted by Tuberculosis and Septicemia. Under this major group, the shares of these two diseases are 28.8 and 37.2 per cent respectively. Septicemia alone accounts for 4.1 per cent of the total medically certified deaths.

- Under the **third** leading group "*Diseases of Respiratory System",* Pneumonia, caused 21.1 per cent deaths, followed by Asthma causing 8.8 per cent deaths. Pneumonia alone accounts for 1.9 per cent of the total medically certified deaths.

- The group of diseases relating to "*Certain Conditions originating in the Perinatal Period"* is the **fourth** leading cause of death, accounting for 6.6 per cent of the total medically certified deaths. Hypoxia, birth asphyxia and other Respiratory Conditions accounts for 40.6 per cent of the deaths under the group and 2.7 per cent of total medically certified deaths.

- The **fifth** leading cause group "*Injury, Poisoning and Certain Other Consequences of External Causes",* has a major constituent 'Burns and Corrosions' contributing 17.9 per cent of the total deaths under this cause group and 1.1 per cent of the total medically certified deaths.

- The major group "*Neoplasm" (Cancer*) is the **sixth** leading cause accounting for 5.3 per cent of the total medically certified deaths, of which 'Malignant neoplasm of digestive organs' accounts for 26.3 per cent of deaths caused by Neoplasm.

- The **seventh** leading cause, "*Diseases of Digestive System"* is responsible for 4.4 per cent of the total medically certified deaths, of which 'Diseases of Liver' alone accounts for 69.3 per cent of the deaths. The share of 'Liver diseases' in the total medically certified deaths is 3.0 per cent.

- 12.2 per cent of the total medically certified deaths were classified under the "Symptoms, signs & abnormal clinical and laboratory findings **not elsewhere classified**" which is the **eighth** leading cause of death.
-

Age-wise:

- Every eighth reported medically certified death has been of the infants (age less than 1 year)

- About 78.5 per cent of infant deaths have been reported to be caused by C*ertain Conditions originating in the Perinatal Period.*

- Among the children aged 1-4 years, *Heart Diseases* including pulmonary circulation have taken the highest toll of 20.1 per cent. Among the children aged 0-4 years, *Complication*

originating in the Perinatal Period caused 67.3% of deaths. In the age-group 5-14 years, the cause group Certain Infectious and Parasitic Diseases claimed the top most position with the share of 23.1 per cent.

- In the age-group of 15-24 years, major group "*Injury, Poisoning & Certain Other Consequences of External Causes"* is the first among the leading causes contributing 23.0 per cent deaths. It implies that these age-groups of youth and adolescent are more vulnerable to injuries and poisoning related deaths.

- In the age-group 25-34 years, the first two leading causes, *Diseases of Circulatory System and Injury, Poisoning & Certain Other Consequences of External Causes* are having the shares of 19.1 per cent and 19.0 per cent respectively.

- In the age-group 35-44 years, the first two leading causes, *Diseases of Circulatory System and Certain Infectious and Parasitic Diseases* are having the shares of 27.3 per cent and 15.8 per cent respectively.

- For all the age-groups of 45 years and above, *Diseases of Circulatory System* is the first leading cause of death. The percentage contribution of this cause group for 45 years and above, to respective age-groups totals has been increasing with age. The percentage share of this cause group to the total medically certified deaths for respective age groups varies from 35.3 per cent to 45.6 per cent.

- The highest number of deaths (2,97,627 i.e. 25.2 per cent of total medically certified deaths), as expected, has been reported for the age-group 70 years and above.

Gender-wise:

- The contributions of male and female deaths in the total medically certified cases has been reported to be 62.3 per cent and 37.7 per cent respectively, with a sex ratio of female deaths to male deaths to be 605 per thousand.

- There is no significant difference in percentage share of male and female medically certified deaths to their respective totals as far as eight leading causes are concerned, except for deaths due to Diseases of the Digestive System. The percentage of female Digestive System Deaths to total female medically certified deaths is 2.5 per cent as compared to the corresponding male figure of 5.5 per cent.

INTRODUCTION

CHAPTER-I

INTRODUCTION

The age, sex and cause-specific mortality rates are important indicators for evidence-based monitoring of health trends in the population. The statistics on causes of death is essential for planners, administrators and medical professionals in undertaking appropriate curative and preventive measures for various health problems. It also plays an important role in furtherance of medical research and is fundamental for monitoring as well as improving the methods of diagnosis and analysis. Under the system of Registration of Births & Deaths, the scheme of Medical Certification of Cause of Death (MCCD) – an integral part of the Vital Statistics System, aims at providing a reliable and temporal database for generating cause-specific mortality statistics. The Office of the Registrar General, India, (ORGI) obtains data on causes of death from the Chief Registrar of Births and Deaths of different States and Union Territories, under the Registration of Births & Deaths Act, 1969.

1.2 The Conference on Improvement of Vital Statistics held in 1961 had recommended the introduction of the scheme of MCCD in limited areas to begin with, and its progressive implementation in phases thereafter. In the first phase, it was to be introduced in the teaching hospitals in the State headquarter-towns including field practice rural areas attached to them, missionary hospitals and such other hospitals which were willing to join. The main objective of the first phase was to gather the practical experience of the problems arising in the introduction of the scheme, so as to place it on sound lines. In the second phase, it was to be extended to District & Sub-division hospitals, specialized hospitals and other private hospitals which were willing to join. In the third phase, private and other public hospitals & Primary Health Units were to be covered and thereafter private physicians practicing modern medicine were all to be brought under the ambit of the scheme.

1.3 During the Third Five Year Plan period, Office of the Registrar General, India launched a programme of action, both short term as well as long term through a plan scheme, for development of a comprehensive system of vital statistics in the country. Accordingly, it was envisaged to introduce the scheme of MCCD in all major medical teaching institutions and other hospitals in different States/UTs. Owing to the lack of adequate medical facilities and consequent difficulty in obtaining medically certified cause of death in several parts of the country; it has been introduced in phases since early seventies.

1.4 It has got the statutory backing under sections 10(2), 10(3), 17(1) (b) and 23(3) of the Registration of Births & Deaths (RBD) Act, 1969.

The provisions relating to MCCD in Registration of Births & Deaths Act, 1969 are as follows:

Section 10(2): In any area, the State Government having regard to the facilities available therein in this behalf may require that a certificate as to the cause of death shall be obtained by Registrar from such person and in such form as may be prescribed.

Section 10(3): Where the State Government has required under sub-section (2) that a certificate as to the cause of death shall be obtained, in the event of the death of any person who, during his last illness, was attended by a medical practitioner, the medical practitioner shall, after the death of that person, forthwith, issue without charging any fee, to the person required under this Act to give information concerning the death, a certificate in the prescribed form stating to the best of his knowledge and belief the cause of death; and the certificate shall be received and delivered by such person to the Registrar at the time of giving information concerning the death as required by this Act.

Section 17(1) (b): Subject to any rules made in this behalf by the State Government, including rules relating to the payment of fees and postal charges, any person may obtain an extract from registration-records relating to any death; provided that no extract relating to any death, issued to any person, shall disclose the particulars regarding the cause of death as entered in the register.

Section 23(3): Any medical practitioner who neglects or refuses to issue a certificate under sub-section (3) of section 10 and any person who neglects or refuses to deliver such certificates shall be punishable with fine which may extend to fifty rupees.

1.5 The necessary data is collected in the prescribed Form No.4- Institutional Deaths (Appendix-II) as filled in by the concerned hospital authorities. A separate Form No.4A-Non institutional Deaths (Appendix-III) has been prescribed for non-institutional deaths, which are attended to by the medical practitioners. These forms conform to the international format of medical certification of cause of death as evolved by the World Health Organisation (WHO). These forms comprising two parts incorporate immediate and antecedent causes of death along with the identification and other particulars of the deceased. Part-I provides for entering the diseases in a specific sequence of events leading to death, so that the immediate cause is recorded first and the underlying cause, the last. The underlying cause is that morbid condition which initiated the chain of events leading to death. Besides, there is also a provision for recording the approximate intervals between onset of disease and death in the sequence of events. Part- II of the form allows recording information on other significant morbid conditions, but not directly related to the cause of death. Doctors attending to the deceased during his/her terminal illness are required to fill the forms up.

1.6 World Health Organization (WHO) periodically reviews the system of International Classification of Diseases (ICD). Tenth revision of the ICD (ICD-10) was endorsed by the Forty-third World Health Assembly in May 1990 and came into use in WHO Member States as from 1994; however, it has been adopted in the ORGI for classification of causes of deaths since 1999 Report on MCCD. The statistics on medically certified causes of deaths has been tabulated as per the National List (ICD –10, modified according to Indian conditions) as given in Appendices-IV & V. The underlying cause of death is taken into account while tabulating the cause-specific mortality.

1.7 The statistics presented in this report, provide information on cause-specific mortality cross classified by sex and broad age-groups. The report is based on medically certified deaths occurring in hospitals (whether public or private) covered under the Scheme. As only selected hospitals, and that too mostly from urban areas, are covered at present under the scheme of MCCD, the profile presented here may not yield the reliable pattern of cause specific mortality prevalent in the states/country. Keeping this in view, the data- users may take due caution while deducing the mortality pattern.

1.8 The report is presented in 4 chapters and 6 appendices. Chapters two and three deal with 'Scheme of MCCD: Status of Implementation' and 'Distribution of Deaths by Cause' respectively. Chapter 4 analyses the specific cause of mortality among different age groups by gender. Appendix-I contains detailed statistical tables for ready reference.

SCHEME OF MCCD:

STATUS OF IMPLEMENTATION

CHAPTER-II

SCHEME OF MCCD: STATUS OF IMPLEMENTATION

The RBD Act, 1969 mandates compulsory registration of births and deaths in the country, and has been in force since 1st April, 1970. Although it is a Central Act, its implementation rests with the States and Union Territories (UTs). At the National-level, the Registrar General, India appointed under Section 3 of the Act, for unifying and co-coordinating the activities of Chief Registrars, provides general direction and guidance in the matter of registration of births and deaths and also for implementation of the Act. The Chief Registrars of Births and Deaths appointed by the State Governments under Section 4 of the Act, function as the Chief Executive Authorities for effective implementation of the Act in an efficient way and report the working thereof. Under the Civil Registration System, the scheme of MCCD is required to be notified under Section 10(2) of the RBD Act, 1969, for its implementation in any area by the respective States and UTs, subject to the availability of requisite facilities therein. Till 2015, 33 States/UTs viz. Andhra Pradesh, Arunachal Pradesh, Assam, Andaman & Nicobar Islands, Bihar, Chandigarh, Chhattisgarh, Dadra & Nagar Haveli, Daman & Diu, Delhi, Goa, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Manipur, Mizoram, Nagaland, Odisha, Punjab, Puducherry, Rajasthan, Sikkim, Tamil Nadu, Telangana, Tripura, Uttarakhand, Uttar Pradesh and West Bengal have reportedly issued notification for the introduction of the scheme of MCCD.

2.2 The MCCD under Civil Registration System has been implemented in the States/UTs in a phased manner to provide data on cause of death. However, it has so far been implemented in only certain hospitals, generally in urban areas which are selected by the Chief Registrar of Births & Deaths. Thus, the scheme covers mostly those deaths, which occur in medical institutions located in urban areas. The coverage under the scheme in terms of percentage level of medical certification as well as the type of hospitals covered has not been uniform across the States/UTs. Some of the States have notified only teaching and specialized hospitals under it, whereas in others, only district hospitals and Primary Health Centers (PHCs) have been brought under its ambit. In order to take the scheme of MCCD forward in a systematic manner in the country, the Registrar General, India has been impressing upon all the States/UTs to bring all hospitals (whether public or private) and private medical practitioners under its coverage, both in rural as well as urban areas.

2.3 As per the reported information, the number of hospitals with in-patient facilities, existing, covered and reporting data on medical certification of cause of death in the States/UTs is presented in Statement 2.3.

MCCD STATUS – STATE SCENARIO

2.4 The scheme of MCCD has been functioning at different levels of efficiency in various States/UTs. During 2015, 33 States/UTs (Appendix VI) reported the data on MCCD in the prescribed format. Statement 2.4 gives the number of registered deaths, medically certified deaths; and percentage of the latter to the former for the years 2013 to 2015 for States/UTs.

2.5 During the year 2015 medically certified deaths to total registered deaths has increased by 1.5 percentage point as compared to the year 2014. Twelve States/UTs which have reported a decline in absolute number of medically certified deaths in 2015 over the previous year are Andhra Pradesh, A & N Islands, Bihar, Chandigarh, D & N Haveli, Lakshadweep, Madhya Pradesh, Manipur, Mizoram, Nagaland, Puducherry, Rajasthan and Sikkim. The report in respect of Haryana, J & K and Uttar Pradesh could not be obtained despite our best efforts.

2.6 During the period 2013-2015, for Daman & Diu, Delhi, A & N Islands, Lakshadweep and Puducherry more than half of the registered deaths have been reported to be medically certified**.** The percentage of medical certification in Assam, Jharkhand Chhattisgarh, Karnataka, Madhya Pradesh, Maharashtra, Odisha and Tamil Nadu has shown an increasing pattern during the said period. Goa registered almost 100 percent medically certified deaths during the period.

RANKING OF STATES/UNION TERRITORIES IN THE MCCD:

2.7 The ranking of States/UTs has been done on the basis of percentage of medically certified deaths to total registered deaths. During 2015, Goa ranked first with 100.0 per cent registered deaths as medically certified, followed by 86.9 per cent in Lakshadweep 84.2 per cent in Daman & Diu, 74.4 per cent in Puducherry and 64.0 per cent in Tripura. Amongst major States, the highest level of medical certification of cause of death has been

observed in Tamil Nadu (40.5 per cent), Karnataka (37.2 percent) and Maharashtra (34.5 per cent). Chart 2.7 depicts the rank of the States/UTs in the medical certification.

GROWTH IN THE MEDICAL CERTIFICATION OF CAUSE OF DEATH

2.8 The time series data on medical certification of cause of death for the 25 years from1991 to 2015 reveals a significant long-term growth in absolute numbers of medically certified cases. There has been a consistent but slow increase in the number of States implementing the MCCD scheme. During these years, the share of medically certified deaths to total registered deaths has been hovering around 12.7 –22.0 per cent. There is a serious cause of concern and entails proper prioritization in effective implementation of the scheme by the States/UTs. The growth in medical certification of cause of death during last 25 years is given in Statement 2.8 and is highlighted in Chart 2.8.

CHAPTER – III

DISTRIBUTION OF DEATHS BY CAUSE

CHAPTER –III

DISTRIBUTION OF DEATHS BY CAUSE

The data on MCCD has been presented as per the National List based on 10th revision of International Classification of Diseases (ICD-10), to facilitate meaningful comparison and drawing valid conclusions thereof. This Chapter aims at summarizing the findings of the data reported on medically certified deaths for 33 States/UTs by age, sex and major cause groups. During 2015, a total of 11, 83,052 medically certified deaths were reported, of which 7, 36,882 and 4, 46,170 pertained to males and females respectively**.** The age and sex distribution of such deaths is presented in the following Statement and is highlighted in Chart 3.1.

Statement 3.1: Age and sex-wise distribution of Medically Certified Deaths– 2015

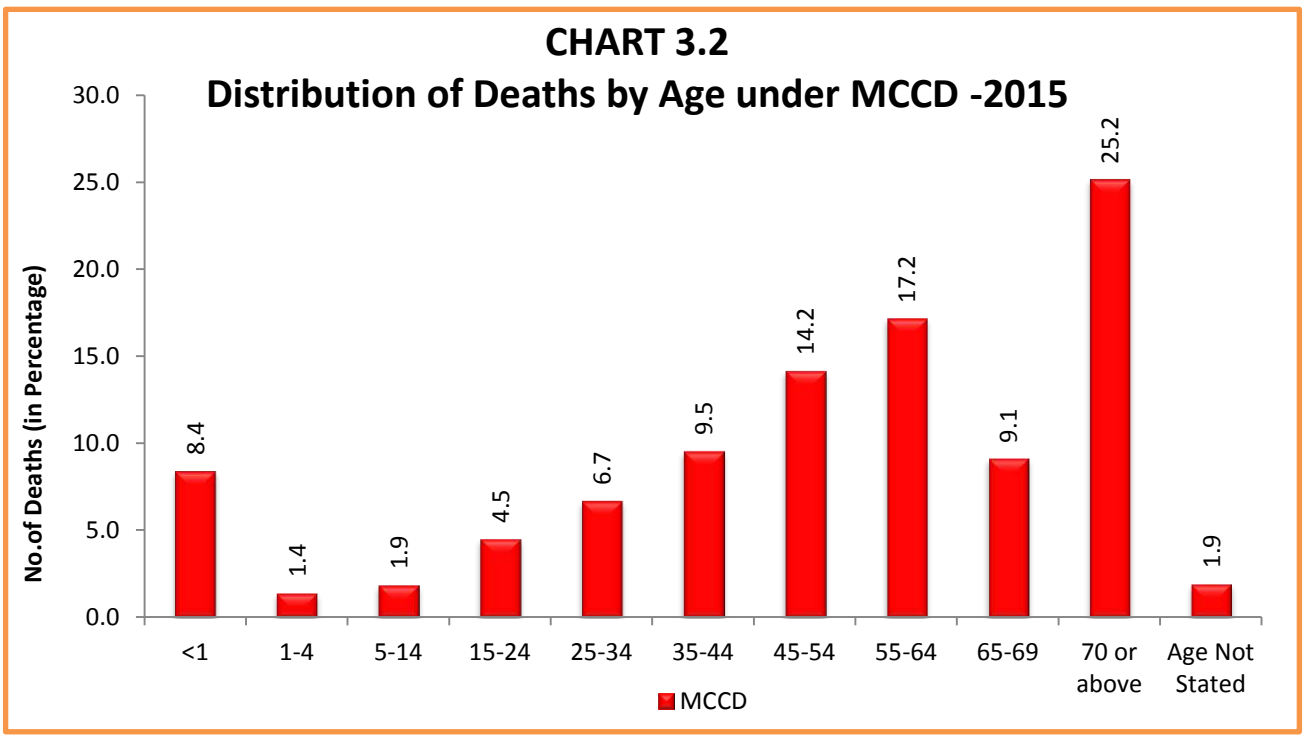
3.2 The contribution of male and female deaths in the total medically certified cases were reported to be 62.3 per cent and 37.7 per cent respectively, with a sex ratio of females deaths to male deaths to be 605 per thousand. It seems that more males are admitted to hospital during last moments of life as compared to females. As per the compiled data, more number of people during old ages (70 years and above) get admitted in hospitals at the time of terminal illness than children and young age population and the same is depicted in Chart 3.2



3.3 The eight leading cause groups of deaths viz., *Diseases of the Circulatory System* (I00-I99), *Certain Infectious and Parasitic Diseases* (A00-B99), *Diseases of the Respiratory System* (J00-

J98),*Certain Conditions Originating in the Perinatal Period* (P00-P96), *Injury, Poisoning and Certain Other Consequences of External Causes* (S00-T98), *Neoplasm* (C00-D48), *Diseases of Digestive System (K00-K92)*and *Symptoms, Sign and Abnormal Clinical & Laboratory Findings Not Elsewhere Classified* (R00-R99) taken together account for about 88.0 per cent of the total medically certified deaths as detailed in Statement 3.4.

3.4 Among the leading cause groups, *Diseases of Circulatory System* constitute the maximum i.e. 33.2 per cent of total medically certified deaths, followed by *Certain Infectious and Parasitic Diseases* has contributed (11.0 per cent) of total medically certified deaths. The *Diseases of Respiratory System* has contributed to (9.0 per cent) of total medically certified deaths followed by *Certain Conditions Originating in Perinatal Period* (6.6 per cent), *Injury, Poisoning and Certain other Consequences of External Causes* (6.2 percent),. *Neoplasms* constitute (5.3 per cent); *Diseases of the Digestive System* constitute (4.4 per cent) and Symptoms, Sign and Abnormal Clinical & Laboratory Findings Not Elsewhere Classified (13.2 percent). In respect of eight leading causes of deaths the gender difference is not significant. However, the sex wise distribution of medically certified deaths shows that the percentages of male deaths to total male medically certified deaths are on a higher side, in case of *Certain Infectious and Parasitic Diseases, Diseases of the Respiratory System, Injury, Poisoning and Certain other Consequences of External Causes* and *Diseases of the Digestive System as* compared to corresponding percentage of female deaths. The percentage distribution of medically certified deaths by leading cause groups is depicted in Chart 3.4

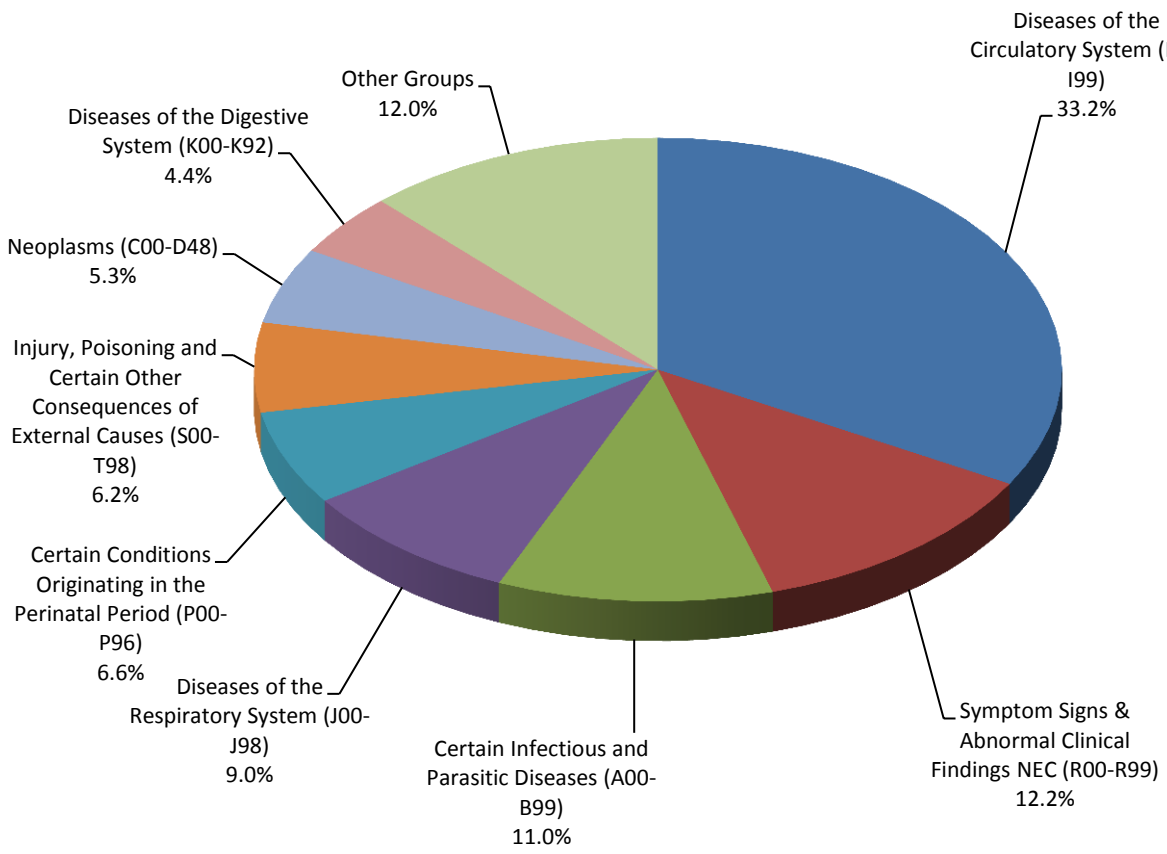
Percentage distribution of deaths under MCCD by leading cause groups - 2015



3.5 The percentage distribution of eight major cause groups of death for the period 2000 to 2015 is presented in the Statement 3.5. The data reveals that, since 2000, the group *Diseases of the Circulatory System* has not only occupied the position of *top-most killer*, but its percentage to total deaths has registered an increasing trend over the years. The increase in the share of deaths under this cause group is 8.9 percentage points in 2015 compared to 2000.

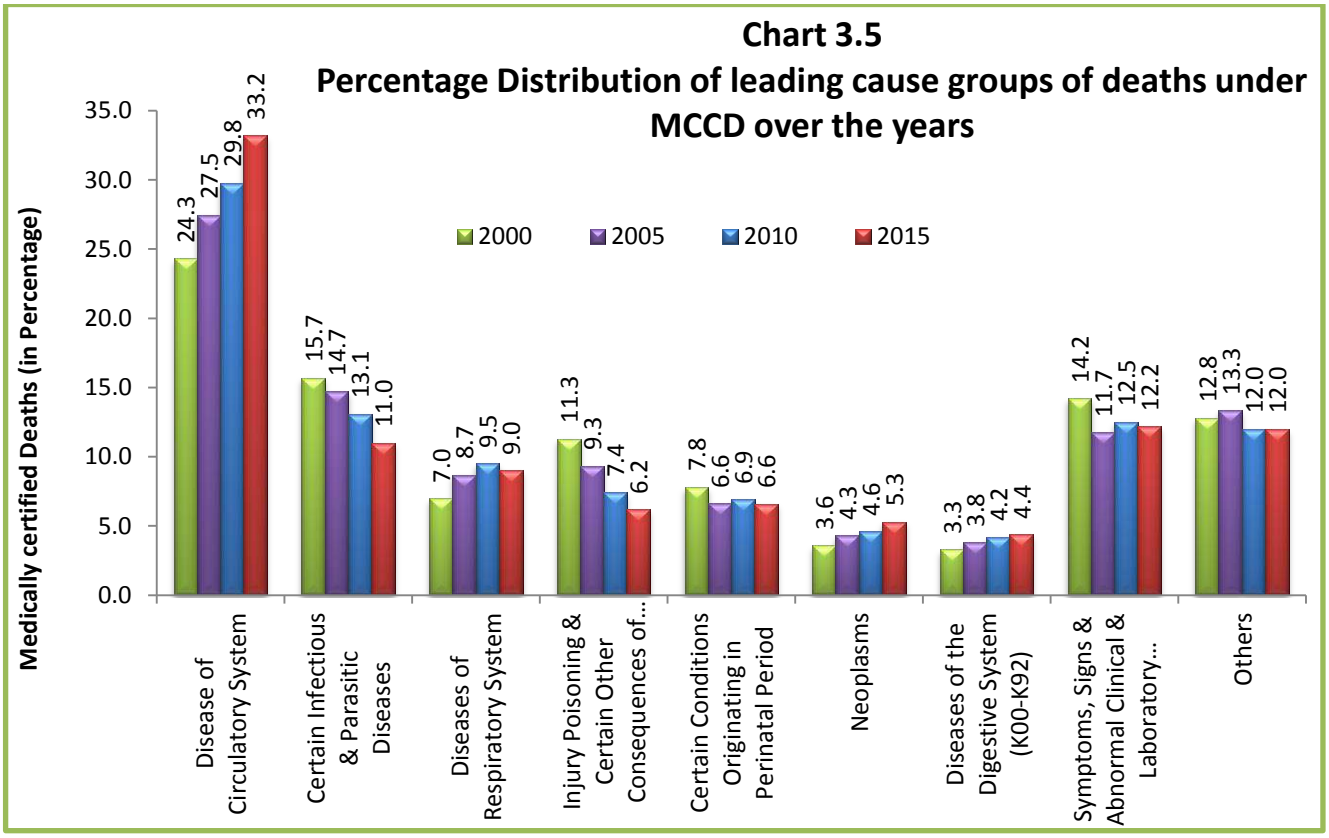
3.5.1 The share of medically certified deaths due to *Diseases of Respiratory System* has varied in the range of 7.0 per cent to 9.6 per cent during the period 2000 to 2015, thus accounting for around 7 to 10 deaths per hundred reported medically certified deaths. The proportion of deaths due to *Injury, Poisoning, and Certain other consequences of external causes* has exhibited a decreasing trend over the years. The percentage of deaths classified under the major group *Symptoms, Sign and Abnormal Clinical & Laboratory Findings, Not Elsewhere Classified* constitutes a significant share of more than ten per cent of medically certified deaths since 2000.

3.5.2 The group of *Diseases of Certain Conditions Originating in Perinatal Period*, which is the prime cause of deaths among infants, has shown a fluctuating pattern in percentage terms over the years.

3.5.3 The percentage of deaths due to *Neoplasms* has varied from 3.6 to 5.4 per cent over these years. The deaths due to *Diseases of Digestive System (K00-K92*) with the share of 4.4 per cent have become the Seventh leading cause.

3.5.4 The chart 3.5 shows the percentage share of leading cause groups of death in MCCD for the years 2000, 2005, 2010 and 2015.



3.6 The State/UT wise distribution of medically certified deaths by eight major cause groups is given in Statement 3.6. The institutions covered under the MCCD are mostly located in urban areas of the different States/UTs in view of the availability of requisite facilities for assigning cause of deaths. Consequently, the number of deaths reported therein may lack the representative character at the State level. Moreover, owing to wide variation between the level of medical certification and registration of deaths across the States, any inter-state comparative analysis of major determinants of deaths will have limitations. However, an attempt has been made to present the comparative situation of major cause groups, based upon medically certified deaths reported by different States/UTs, as their number is reasonably adequate to throw valuable insight into deaths by various cause groups and their gravity.

3.6.1 As depicted in the Statement 3.6, more than thirty per cent of total medically certified deaths reported from each of the thirteen States/UTs namely, Andhra Pradesh, A N Island, D & N Haveli, Daman & Diu, Goa, Jharkhand, Karnataka, Lakshadweep, Maharashtra, Tamil Nadu, Tripura, Telangana and West Bengal belong to the cause group *Diseases of Circulatory System.* In Telangana, as high as 53.0 per cent of deaths (more than half of the deaths), have been reported to be medically certified as Circulatory System deaths as against Assam which has reported as low as 6.9 per cent against the corresponding figure for all reporting States taken together to be 33.2 per cent.

3.6.2 The group Certain Infectious and Parasitic Diseases constitutes 11.0 per cent of medically certified deaths for all the reporting States taken together. Its share in total medically certified deaths of Jharkhand is as high as 27.6 per cent in 2015 closely followed by Assam 26.3 per cent Arunachal Pradesh 20.4 per cent, Bihar 19.1 per cent and Delhi 17.1 per cent.

3.6.3 The group, Diseases of Respiratory System constitutes 9.0 per cent of medically certified deaths. Its share in total medically certified deaths was the highest in case of Tripura (32.5%) whereas the lowest (3.2%) was reported in Telangana.

Among 4745 female deaths caused by 'Malignant neoplasm of bone, mesothelium and soft tissue, skin and breast', 4066 (about 85.7 per cent) are due to breast cancer (Ref-table 6 Appendix). Breast Cancer alone accounts for around 15.0 per cent of total female neoplasm deaths. The age composition of deaths due to *Neoplasm* is presented in Statement 3.12.2 and is highlighted in Chart 3.12.2.

3.12.2 The incidence of Neoplasm death is reported to be the highest i.e. 23.5 per cent in the age group '55-64 years' (24.1 per cent of males and 22.7 per cent of females) followed by the age group '70 year and above 'recording 20.8 per cent of deaths (22.3 per cent of males and 18.9 per cent of females). Around 85.7 per cent of total Neoplasm deaths is concentrated in the age-group '35 years and above'. It is supportive of age as a major risk factor of Neoplasm deaths as indicated in epidemiological literature.

3.21 Mental and Behavioral Disorders (V): The group relating to *mental and behavioral disorders* accounts for 2597 deaths (0.2 per cent of total medically certified deaths) of which male and female distribution of deaths are 68.6% and 31.4% respectively. The age group 25-64 years constitutes around 53.5 per cent of total deaths due to mental and behavioral disorders. Under this cause group, the deaths due to mental and behavioral disorders caused by the use of psychoactive substance such as alcohol, opioids, cannabinoids, hypnotics, cocaine, hallucinogens, tobacco, volatile solvents, stimulants, including caffeine etc. constitutes the highest share (46.0 per cent) of total deaths. The use of psychoactive substances reportedly accounts for the highest number of deaths (233) in the age-group 45-54 years closely followed by 221 and 189 deaths in the age-group 35-44 years and 55-64 years respectively. The use of psychoactive substances has contributed to 36.7 per cent of total deaths due to mental and behavioral disorders in males; whereas it is only 9.3 per cent in case of females (detailed at Table 6 in Appendix I). The distribution of major causes of deaths under this group is presented in Statement 3.21

3.23 Diseases of the Musculoskeletal System and Connective Tissue (XIII): These contribute to only 1347 deaths i.e. around 0.1 per cent of total medically certified deaths.

3.24 No significant mortality is reported due to **Diseases of the Eye and Adnexa (VII)** and **Diseases of the Ear and Mastoid Process (VIII)** reporting merely 117 and 55 deaths respectively.

SPECIFIC CAUSE OF MORTALITY IN DIFFERENT AGE GROUPS

CHAPTER –IV

SPECIFIC CAUSE OF MORTALITY IN DIFFERENT AGE GROUPS

This chapter analyses the specific cause of mortality among different age groups by gender.

4.1 Infants: Out of the total medically certified deaths, around 8.4 per cent has been reported for the infants (children who could not complete their first birthday). The shares of male and female infant deaths to the corresponding totals of medically certified deaths are 8.2 per cent and 8.7 per cent respectively. The highest incidence of death under this age-group Certain Conditions Originating in the Perinatal Period (78.5 per cent).The constituent diseases of this group like Hypoxia, birth asphyxia and other respiratory conditions and slow fetal growth, fetal malnutrition and Immaturity caused 31.9% and 28.5 % deaths respectively. The next in order was Diseases of Respiratory system which was responsible for 5.2 per cent deaths. Under this major group Pneumonia alone accounted for 2.4 per cent deaths. The third major group accounting for 3.9 per cent deaths was congenital malformation, deformation and chromosomal abnormalities. The constituent diseases of this group, congenital malformation of circulatory system alone caused 2.3 per cent deaths. The major group of diseases of the circulatory system constituted 1.6 per cent deaths. The heart diseases including pulmonary circulation one of the constituent diseases of this group caused 1.2 per cent infant deaths. The prominent causes of mortality among infants by gender have been given in Statement 4.1.

APPENDIX - IV

Major Groups and the description of ICD-10 Codes

The classification of diseases may be defined as a system of categories to which morbid entities are assigned according to established criteria. The Tenth Revision of International Classification of Diseases (ICD-10) is a single coded list of three-character categories, each of which can be further divided into up to ten four-character subcategories. In place of the purely numeric coding system of ICD-9, ICD-10 uses alphanumeric code with a letter in the first position and a number in the second, third and fourth positions; the fourth character follows a decimal point. The code numbers can range from A00.0 to Z99.9. The letter U is not used and is kept blank for use in future. Codes U00-U49 is kept reserved to be used for the provisional assignment of new diseases of uncertain etiology. Codes U50-U99 may be used in research, e.g. when testing an alternative sub-classification for a special project.

2. The National list for tabulation of Morbidity and Mortality based on the Ninth Revision of ICD-9, 1975 was adapted in MCCD from 1980 to 1998. Subsequently, the World Health Organization (WHO) brought out 10^{th} Revision of International Classification of Diseases (ICD) and the National List for tabulation of Morbidity and Mortality data, based on ICD-10 has been finalized in consultation with the states to meet their requirements and has been adopted from 1999 onward for MCCD Report. The list based on ICD-10 comprises of 20 major Groups, 69 categories and 193 sub-categories of causes as compared to 18 major groups including supplementary classification of Injury & poisoning, 66 categories and 194 sub-categories of causes (includes few single causes) of national list based on ICD-9. Chapters, Blocks of three-character categories and group of three/four-character categories of ICD-10 have been considered as Major Groups, Categories and sub-categories respectively in the national list.

3. As per the recommendations of the ICD-10, data on "Medical Certification of Cause of Death" have been tabulated for a total of 69 categories of causes under Major Groups I to XX of National List including External Causes of morbidity and mortality.

National List based on ICD-10
Major Groups I to XIX: 1. Categories-58 (Group of three-character categories) 2. Sub-categories-177 (Group of 3/4–character categories and 3/4 -character single category) & **Major Group XX:** External Causes of Morbidity & Mortality 3. Categories-11 (Group of three-character categories) 4. Sub-categories-16 (Group of 3/4–character categories and 3/4 -character single category)
