ENSURE REGISTRATION OF EVERY BIRTH AND DEATH

PREFACE

The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent and compulsory recording of the vital events and characteristics thereof, as per legal requirements in the country. In India, the Civil Registration System covers registration of births and deaths. It provides the best source of information on the vital rates at all levels.

2. This issue of the Report on 'Vital Statistics of India based on the Civil Registration System' for the year 2015 provides an overview of the working of the Civil Registration System (CRS) in the country and presents a compilation of data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up and sex ratio at birth based on Civil Registration Records. Ideally, an Annual Report on vital statistics containing more detailed information should have been brought out. However, due to limited availability of information contained in the Annual Reports of some of the States, the report for the year 2015 containing key information of events pertaining to the time period 1st January 2015 to 31st December 2015 has been brought out for the convenience of users. An attempt has been made to present more detailed analysis as compared to previous Reports.

3. The publication is divided into two parts. Part I provides a brief review of the Civil Registration System and contains a summary analysis of data on registered births, deaths, infant deaths and sex ratio at birth at State level. Part II consist of the main tables which provide State and District-wise data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up and sex ratio at birth.

4. The data source for the report is the statutory Annual Statistical Report prepared by the Chief Registrars of Births & Deaths of States/UTs. I take this opportunity to express my sincere gratitude to all the Chief Registrars of Births & Deaths of various States/UTs for their kind co-operation in providing the requisite information.

5. The report has been prepared by the Vital Statistics Division of this office. I would like to place on record my appreciation for the efforts put in by all the officers and staff working in the CRS Section of the Office of the Registrar General and the Officers/Staff connected with the Civil Registration system in the States/UTs.

EXECUTIVE SUMMARY

Civil Registration System (CRS) in India is the unified process of continuous, permanent, compulsory and universal recording of the vital events (births, deaths, still births) and characteristics thereof. The Registration of Births and Deaths Act, 1969 (Act No. 18 of 1969) provides for the compulsory registration of births and deaths. Civil Registration records are the best source of Vital Statistics. For the individual, records emanating from CRS provides her/his legal identity and access to the rights of a citizen including entitlements (social benefits provided by the Government). For the country, the requirement of a complete CRS system is a must as it has important administrative and statistical uses. The data generated through a complete and up to date CRS is essential for socio-economic planning and to evaluate the effectiveness of various social sector programs. They also serve as the cornerstone of public health system. The Annual Report on Vital Statistics of India based on Civil Registration System for 2015 has been brought out on the basis of reports provided by the Chief Registrar of Births and Deaths of respective States/Union Territories. The main features of the Annual Report are summarized below:

CHAPTER – I

CIVIL REGISTRATION SYSTEM - AN INTRODUCTION

1.1 The requirement for a complete and up to date Vital Statistical System to yield reliable data on vital events hardly needs any emphasis. These data are essential for socio-economic planning and development and also to evaluate the effective implementation of various public schemes and programs. The main sources of data on vital events in India are Civil Registration System (CRS), Sample Registration System (SRS) and Population Census. Though the Population Census is the main source of information on population and its characteristics; however, being a decennial exercise, it does not provide the measure of changes in population from year to year. The measures of fertility and mortality derived from Census are centered on the midpoint of the decade and as such do not provide yearly change in the population. Of the other two sources of vital statistics for getting the vital rates on a regular basis, the SRS has been designed to provide reliable estimates at National and State level. Robust estimates of vital rates at District level on an annual basis through sample survey are difficult to obtain on account of prohibitively large sample size and variety of resultant factors such as controlling of non-sampling errors etc. CRS is thus the only source for providing vital rates at district level. Rather, a complete CRS can provide these rates at all administrative levels.

1.2 The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent, compulsory and universal recording of the vital events and characteristics thereof, as per legal requirements in the country. In India, the Civil Registration System covers registration of births and deaths. Civil registration system provides the best source of information on the vital rates at all levels. Ensuring cent percent coverage of vital events by registration machinery can help in getting the critical vital statistics, equally important for planning and research. Therefore, emphasis should also be given to the proper monitoring of the activities under the system. Civil registration system is considered to be complete if it covers 90 per cent or more of all births and deaths taking place within a country or area.

1.3 The registration records are primarily useful for their value as legal documents and secondarily as the source of vital statistics. Civil registration as a source of vital statistics is relatively less expensive, as the statistics generated from the registration records are the by-products of an essential administrative process. The registration records can also generate current and continuous statistics, which can be more accurate than any other method of data collection apart from being a continuous source of such data. However, the accuracy of the vital statistics obtained through the registration system depends much on the completeness and promptness with which events are registered and the correctness of the information in the registration records. The improvement in the system of registration of births and deaths is critically dependent on the importance given by the respective States and District administrations to this work and regular monitoring by them. Besides, the level of awareness among the general public about the utility of birth or death certificate is also equally and crucially important.

1.4 Vital statistics obtained through registration records at different administrative levels enable estimation of the size, structure and geographical distribution of the population except for migration. Vital statistics also enables the projections for coming years on the basis of probable trends of fertility and mortality as derived from these vital statistics and their interactions with social, economic and other demographic factors. The vital statistics data generated through an effective Civil Registration System is of immense use for formulation of various development and welfare programmes/ schemes and increases their effectiveness at State and District level. The Civil Registration data acquires

paramount importance in the wake of 73rd and 74th amendments to the constitution of India, as it can provide data at local level for micro level planning, monitoring and evaluation of schemes. At national level, the vital statistics data generated through Civil Registration is also quite useful for medical research and in the study of sex ratio, mortality and morbidity rates and also in the study of causes of deaths.

Registration of births and deaths in India

1.5 In India, the registration of births and deaths is carried out under provisions of the Registration of Births and Deaths (RBD) Act, 1969. The registration is done by the Registrar of the local area, appointed by concerned State/UT Government.

1.6 Provision for registration of births and deaths and the mechanism thereof had been in existence in India for more than a century. Earlier, the work of registration of birth and death was carried out under various laws and byelaws existing at that time in different parts of the country. The need for improvement in the vital statistics system was felt for long and, therefore, after detailed deliberations at various levels, the Registration of Births & Deaths Act, 1969 was enacted providing compulsory registration of births and deaths in India. Since then, this Act has been enforced uniformly across all the States and Union territories(UT). This Act provides for registration of births and deaths and publication of statistical reports annually based on the civil registration data. The enactment of this Act has provided a common framework for putting in place an effective system of registration of births and deaths in the country.

1.7 The registration work at various levels in States/UTs is performed by different Departments. The existing organizational set-up involved in the work of civil registration at various levels in different States/ UTs is given at **Annexure-A**. A uni-linear hierarchy exists in 12 States/ UTs where single department is involved at all levels of registration. In 9 States namely Assam, Chandigarh, Haryana, Lakshadweep, Meghalaya, Odisha, Punjab, Sikkim and A&N Islands; Health Department is involved at all levels of registration. Panchayat department in Kerala, Revenue department in Dadra & Nagar Haveli and Local Administration Department in Puducherry are responsible for execution of this work at all levels. At present, Health Department supervises the civil registration work at State level in 21 States/ UTs, Department of Planning, Economics & Statistics in 12 States/ UTs, Department of Panchayats in Kerala, Revenue in Dadra & Nagar Haveli and Local Administration Department in Puducherry.

1.8 In order to simplify and speed up the process of registration and to bring in uniformity in birth and death registration formats, the registration system was revamped in the year 2000. Under the revamped system, the procedure for registration of births and deaths was also modified to some extent and the forms were redesigned. Most of the tables that are to be part of the Annual Report of the Chief Registrars on registration of births and deaths under revamped system would be based on the information of place of usual residence of mother in case of births and place of usual residence of the deceased in case of deaths. The revamped system became operational in 2000 in all States/Union Territories except Assam, Arunachal Pradesh, Gujarat, Haryana, Himachal Pradesh, Jharkhand, Odisha, Punjab, Uttarakhand and Uttar Pradesh. It was implemented in Assam, Arunachal Pradesh and Odisha in 2001, Haryana in 2002, Himachal Pradesh, Uttarakhand and Uttar Pradesh in 2003, Gujarat and Punjab in 2004 and Jharkhand in 2009.

Statistical Reports

1.9 System of registration of births and deaths is constantly generating statistical information at the local level. The information contained in the reporting forms is consolidated by the Registrar for onward transmission to the Chief Registrar of concerned State/UT. She/he, in turn, is required to submit an Annual Report on the working of the Act and a Statistical Report to the State Government by July and December respectively of the following year to which the report relates. The Chief Registrars are also required to send a copy of these Reports to the Registrar General, India, Govt. of India.

1.10 Based on the Annual Reports prepared by the States/UTs, the Office of the Registrar General, India, brings out an annual comprehensive report entitled “Vital Statistics of India based on Civil Registration System”. These reports have been brought out since 1958 (Before the enactment of Act, only statistical reports were brought out). However, some of the States are not bringing out their Annual Statistical Reports in time, and this in turn, delays the publication of the corresponding national report. It has also been observed that some States also do not include all the prescribed tables in their reports thereby creating a limitation while bringing out the national report. However, notwithstanding all these constraints, this report provides vital indicators including the District-wise registered births and deaths along with infant deaths with sex-wise and rural-urban break-up of registered events for the year 2015.

CHAPTER – III

A BRIEF ANALYSIS OF DATA ON REGISTERED BIRTHS, DEATHS AND INFANT DEATHS

3.1 Births and deaths are the two most important vital events in the life of an individual and for the society as a whole. Based on the data collected under the Civil Registration System on registered births and deaths, this chapter presents the trend in the level of registration, vital rates and other related indicators, at the State and National level. To get an idea on the coverage of Civil Registration in the country, the data generated from the Civil Registration System has been compared with corresponding estimates thrown up by the Sample Registration System. However, while interpreting the two statistics it should be borne in mind that data under Civil Registration is based on place of occurrence and Sample Registration System is by the place of usual residence of mother. Although in some States/UTs, the registration data continues to be deficient due to various local factors like non-reporting, non-registration etc., the overall level of registration across the States / UTs has shown an upward trend.

3.2 In 2015, the number of registration units along with the level of reporting at the national level and the States/UTs with rural/urban details may be seen at Statement 6. It may be noted here that level of reporting indicates the status of returns of registered births and deaths by the concerned Registrar within a State / UT during the year. It provides the deficiency at a glance and helps in reviewing the registration system and taking measures that would be necessary to improve the registration levels, wherever required.

3.3 At the national level, 83.1% of the registration units reported monthly returns of registered births and deaths to the District Registrar's Office during 2015. For rural areas, the reporting level are at 82.6% and for urban areas, it is 84.8%. However, these figures do not include Arunachal Pradesh for which rural-urban breakup has not been made available by the State. In respect of Gujarat and Jharkhand, data pertaining to 2013 while for Himachal Pradesh, Sikkim, Tripura and Daman & Diu data for the year 2014 in respect of number of units has been used due to non-receipt of requisite information during the year.

3.4 Cent percent level of reporting have been achieved by 13 States/UTs viz. Assam, Chhattisgarh, Goa, Haryana, Kerala, Odisha, Punjab, A & N Islands, Chandigarh, D & N Haveli, Lakshadweep, Puducherry and Tamil Nadu.

3.7.1 Registration of Birth & Death within prescribed time limit of 21 days

3.7.1.1 Twenty Seven States/UTs have provided data on Birth & Death registration with respects the prescribed time period. The registered births and deaths have been classified in four categories depending upon their period of registration. The four time periods considered for the purpose are: i) within prescribed time limit (up to 21 days), ii) After 21 days but within 30 days, iii) After 30 days but within 1 year, iv) More than 1 year. The 4 States namely Bihar, Gujarat, Jharkhand and Haryana(Death Only) have not provided data on time gap of birth and death. The reasons given by these States for not supplying the data are lack of computerization and Governance issues. Further, Himachal Pradesh, Manipur, Tripura, Sikkim, Daman & Diu and Uttar Pradesh have given only partial data and therefore has not been taken into account while consolidating the data.

3.7.1.2 On the basis of data received from States/UTs the percentage of registration achieved out of total registration undertaken in 2015 within prescribed time limit (21 days) is as under:

Statement 11: Registration completed within prescribed time limit (21 days)

3.7.1.3 The above Statement 11 shows the percentage of births registered within the stipulated time period of 21 days to the total births registered in the state. 7 States have achieved more than 90% registration of births within the prescribed time limit of 21 days. Further, 8 States are in the category of 80 to 90 percent, 7 States are in the category of 50 to 80 percent and remaining 4 States are under the category of less than 50 percent in completing the birth registration within time limit of 21 days. In Statement 12, the State-wise percentage of birth registered within stipulated time period has been arrange in descending order.

3.7.1.4 The Statement 11 also showsthe percentage of deaths registered within the stipulated time period of 21 days to the total deaths registered in the state and arranged in descending order. 8 States have achieved more than 90% registration of death within prescribed time limit of 21 days. 7 States are in the category of 80 to 90 percent, 7 States are in the category of 50 to 80 percent and remaining 4 States are under the category of less than 50 percent in death registration within prescribed time limit of 21 days. In Statement 13, the State-wise percentage of death registered within stipulated time period has been arrange in descending order. Chart 3 & 4 shows percentage of Births and Deaths registered within stipulated time period respectively.

3.8.1 Chart 5 on sex wise distribution of registered births reveal that share of registered female births is about 6 per cent short of registered male births.

3.8.2 On the other hand, in case of death registration, the share of male registration is about 16.3 per cent more than female. (Statement 14). Sex wise distribution of registered deaths is presented in Chart 6.

3.9 Sex-wise Distribution of Registered Births and Deaths of Major States

3.9.1 Chart 7 and 8 respectively shows the sex-wise distribution of registered births and deaths for the major States (population of more than 10 million as per Census 2011). The data on birth registration reveals that the share of male registration is more than the female in almost all these major States. This gap is much wider for Uttar Pradesh, Rajasthan, Bihar, Tamil Nadu, Maharashtra, Madhya Pradesh, Karnataka and Assam. In case of Death Registration, the gap is wider for Maharashtra, Tamil Nadu, Rajasthan, Karnataka, Uttar Pradesh, Bihar and West Bengal. The State-wise figures have been provided in Statement 15.

3.10.1 The time series data on registered births and deaths for the years 2006 to 2015 reveals a significant growth in coverage of registration. Share of birth registration has crossed the level of 80 percent and has reached to 88.3% during 2015 - a good indication for the system of Civil Registration. In case of death registration, it has reached 76.6% in 2015 from 74.3% in 2014. Chart 9 and 10 shows estimated & registered births and deaths respectively.

3.11.1 While comparing estimated and registered births, a significant gap is found in estimated and registered births in Uttar Pradesh, Bihar, Madhya Pradesh, Jharkhand West Bengal, Karnataka, Telangana and Jammu & Kashmir. The States of Chhattisgarh, Tamil Nadu, Haryana, Assam and Uttarakhand have more number of registered births than estimated. Chart 11 shows the distribution of estimated and registered births respectively in major States.

3.11.2 Similarly for estimated and registered deaths, there is significant gap in estimated and registered deaths in Uttar Pradesh, Bihar, Madhya Pradesh, West Bengal, Assam, Jharkhand, Andhra Pradesh, Rajasthan and Telangana. Chart 12 shows the distribution of estimated and registered deaths in major States.

3.12 Medical attention received at the time of birth and death

3.12.1 The data on birth by type of medical attention received at the time of delivery has been reported from 29 States/UTs and the distribution of medical attention received at the time of birth for these States/UTs has been illustrated in Chart 13. The data shows that majority of births have been occurred in an institution, either in Government or private hospitals. Institutional births occurred in about 77.5% of cases, 11.8% of the cases were attended by the Physicians/Nurse/Midwife. However, about 4.6% of the events are still attended by untrained Mid-wife/Dai and another 3.6% by others.

3.12.2 Chart 12 represents the distribution of medical attention, received by the deceased at the time of death on the basis of data received from 28 States/UTs. It is evident from Chart 14 that 39.7% of the total registered deaths have occurred in institutions and is on a higher side than that of other places from where the deceased had received medical attention. About 6.0% of the total registered deaths during 2015 have received medical attention from qualified allopathic professional and 29.7% of deceased did not receive any medical attention at the time of death.

3.13 Infant Deaths

3.13.1 The infant deaths registered by place of occurrence (Rural /Urban) of the event for the year 2015 has been given in Statement 17. It may be observed that the share of rural area is only 28.8% while that of urban area is 64.2% in total registered infant deaths during the year. Non registration of infant deaths in rural area is a cause of concern which may be due to non-reporting of infant deaths to the Registrars especially in case of domiciliary events. This figure is exclusive of returns of Jharkhand due to non-receipt of information from the State. Statement 18 gives the percentage distribution of sex wise infant deaths which reveals that the share of female deaths in total female deaths is higher than the corresponding male figures.

Statement 17: Percentage distribution of registered infant deaths by place of occurrence, 2015

Total*	6267685	182988	100.0	2.9

*: Includes the cases of sex not reported, so does not match with the addition of rural and urban.

Statement 18: Percentage distribution of infant deaths by sex, 2015

Sex	No. of Registered Deaths	No. of Registered Infant Deaths	% Share of Registered Infant Deaths to Total registered Deaths

3.14 Still Births

3.14.1 The World Health Organisation (WHO) defines a still birth as a baby born with no signs of life at or after 28 weeks' gestation. Still birth, also known as foetal death, has been defined as '*death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.*'

3.14.2 Statement 19 presents still births registered by place of occurrence (Rural /Urban) of the event for the year 2015 and it may be observed that in total registered still births, share of rural registered still births is only 35.0% which may be due to poor netting of still births in rural areas. In urban areas, this share is about 57.9% which may be due to better netting of still births from medical institutions. Non registration of still births in rural area is a cause of concern and need to be addressed by the concern Registrar(s). This is based on registered events from 35 States/UTs. State-wise registered still births has been depicted in Table 4.

Statement 19: Still Births registered during 2015

Place of Occurrence	No. of Registered Still Births	% Share of Registered Still Births by Place of Occurrence
Rural	59911	35.0
Urban	99046	57.9
Total*	171129	100.0

*Sum of Rural and Urban may not match with Total as some of States have not supplied Rural-Urban breakup.

3.15 Analysis and Findings

Level of Registration (LOR)

3.15.1 The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance of a State / Union Territory in registration of births and deaths. In the absence of reliable estimates of number of births and deaths on a year to year basis from any other source, the number of events as revealed from SRS is used to calculate the level of registration. The level of registration so calculated is very high for some of the smaller States/Union Territories either due to the lower estimates of vital events than the actual and due to the fact that SRS estimates of vital events are based on the place of usual residence while events are registered at the place of occurrence irrespective of the place of residence.

3.15.2 The levels of registration of births and deaths for India and States/UTs for the period 2006 to 2015 are shown in Statements 20 and 21 respectively. The level of registration of births has increased to 88.3% in 2015 from 69.0% in 2006 i.e. in last 10 years an increase of about 19.3%. Similarly, the level of registration of deaths has also increased to 76.6% in 2015 from 63.4% in 2006, showing an increase of 13.2% over the last 10 years. Chart 15 depicts the trend in level of registration of births and deaths from 2006 to 2015. Though the level of registration for births has recorded consistent improvement over the years, gap of about 11.7% in case of registration of births and about 23.4% for registration of deaths at all India level remains a cause of concern.

3.15.3 Chart 16 gives the level of registration of births for India and States/UTs for the year 2015. The 15 States/UTs namely Puducherry, Delhi, Chandigarh, Uttarakhand, Tamil Nadu, Nagaland, Mizoram, Meghalaya, Manipur, Himachal Pradesh, Haryana, Chhattisgarh, Assam, Arunachal Pradesh, and Maharashtra have recorded cent percent registration of births in 2015.

3.15.4 Statement 20 reveals that the States/UTs continue to function at different levels of registration during 2006-2015.

3.16.2 As is evident from the above, the SRB has shown a decline of 6 points from 2014. The figures varies from State to State. D & N Haveli and Tripura registered top two slots respectively followed by Meghalaya while Manipur has shown the lowest sex ratio at birth for the same year. Status of States according to Sex Ratio at birth in respect of registered births is shown in chart 20.

3.17 Time Gap in Registration of Birth & Death

3.17.1 On the basis of data made available by States/UTs, the national data table on time gap of birth and death registrations i.e. within time limit (<21 days), 21-30 days, 30 days to less than 1 year and After one year has been prepared and may be seen in Statement 24 and 25. Bihar, Gujarat Haryana(Death) and Jharkhand have not provided the requisite data and hence not included in the table. The main reason stated is lack of computerization and Governance issues. In respect of Himachal Pradesh, Manipur, Sikkim, Tripura, Daman & Diu and Uttar Pradesh, it has been found that the data is not consistent and also in some cases the total events of different interval do not tally with total births/deaths hence has not been published.
