

India's COVID-19 Recovery Rate climbs to 67.62%, as total recoveries cross 13.2 lakh

Case Fatality Rate (CFR) continues to slide, improves to 2.07%

Posted On: 06 AUG 2020 2:37PM by PIB Delhi

The total recoveries of COVID-19 patients have jumped to 13,28,336 with 46,121 COVID-19 patients being discharged in the last 24 hours. With such consistent increase in recoveries, the gap between recovered patients and active COVID-19 cases has reached 7,32,835.

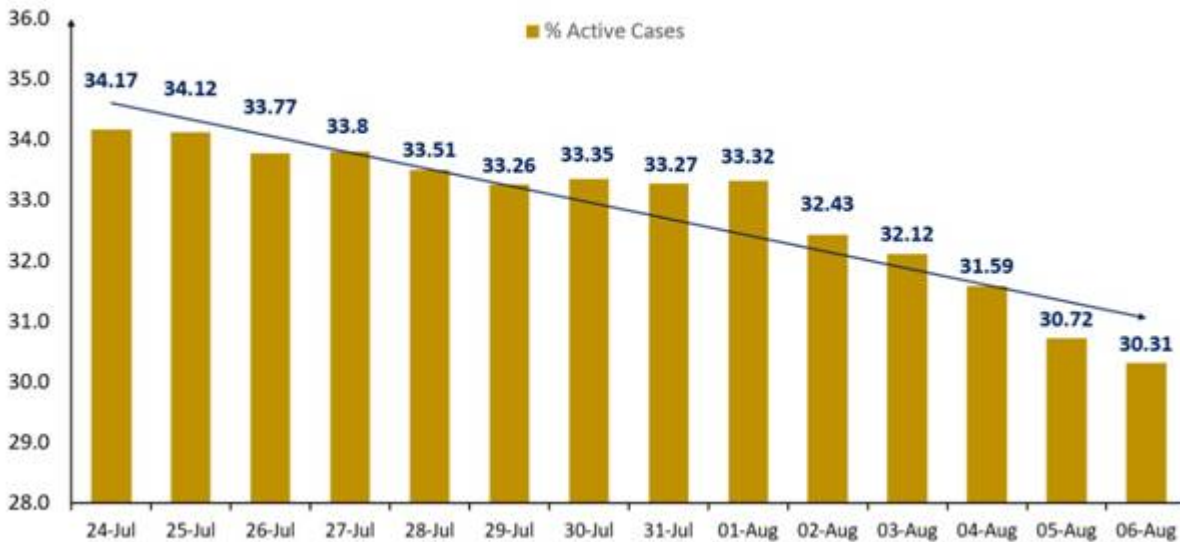

The recovery rate has continued its upward journey to reach another record high of 67.62% amongst COVID-19 patients.

The actual case load of the country is the active cases (5,95,501) which is 30.31% of the total positive cases. They are under medical supervision either in hospitals or in home isolation.

The active cases as a percentage of total cases have seen a significant drop from 34.17% on 24th July 2020 to 30.31% as on today.

% Active Cases is showing continuous decline

Under the 'Whole of Government' approach, the public and private sector resources are combined towards the COVID-19 response and management under the Centre-led strategy. Focused implementation of "Test Track Treat" strategy by the Union and State/UT governments, ramped up hospital infrastructure and testing facilities, and emphasis on treatment of the hospitalized patients through the Standard of Care protocol advised by the Centre have effectively ensured that mortality of COVID-19 patients is contained. As a result, the Case Fatality Rate (CFR) has been low when compared to the global scenario and it has been progressively falling. The Case Fatality Rate stands at 2.07% today.
