

High recoveries push India's Recovery Rate to nearly 75%

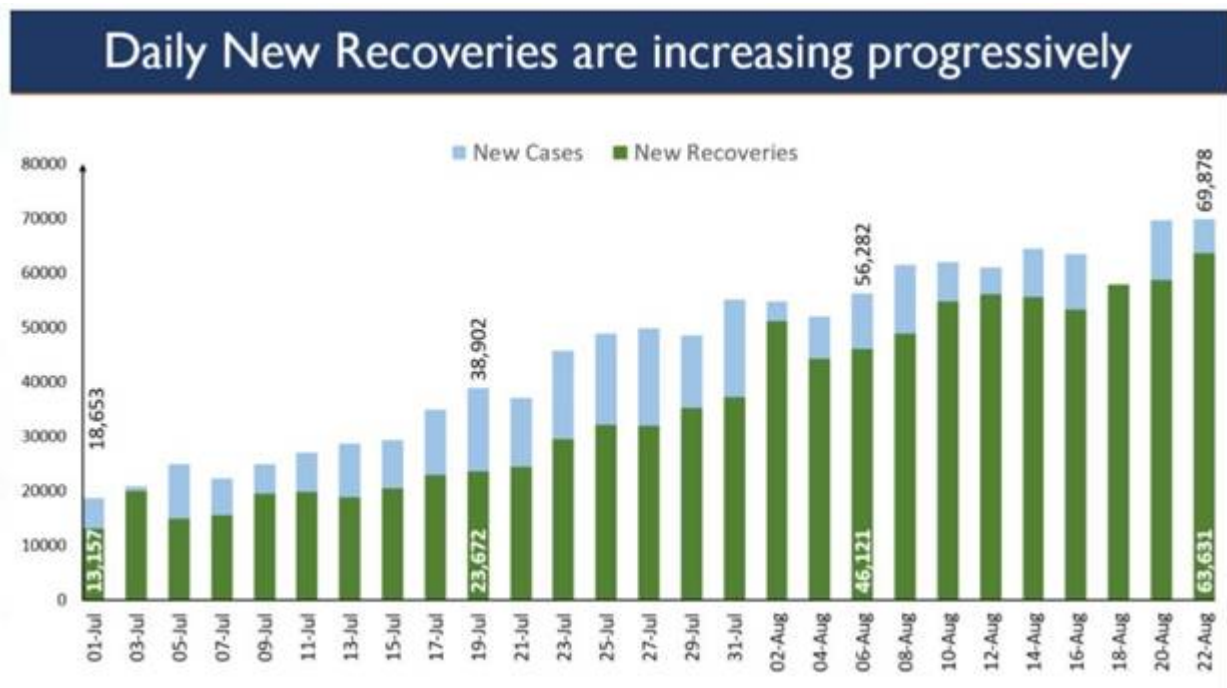

Recoveries exceed the Active Cases by nearly 16 lakh

One of the lowest globally, India's Case Fatality Rate further dips

Posted On: 23 AUG 2020 2:50PM by PIB Delhi

A consistently increasing number of recoveries has pushed India's Recovery Rate amongst the COVID-19 patients to nearly 75%.

With the recoveries of 57,989 COVID patients in the last 24 hours, the total number of recoveries has reached 22,80,566 today.

India's total recoveries now exceed the total active cases (7,07,668) by nearly 16 lakhs (1,572,898).

As the graph shows, the average daily number of recoveries is on a constant upward move from 15,018 (1-7 July 2020) to 60,557 during the week of 19-13 August 2020.

Average Daily Recovered Cases (Week wise)

The constantly increasing recoveries have ensured that the actual caseload of the country viz. the active cases, has reduced and currently comprises only 23.24% of the total positive cases. This has also resulted in gradually falling mortality rate. Currently at 1.86%, India's Case Fatality Rate (CFR) is one of the lowest globally. It has been made possible because by comprehensive and sustained effectiveness of the Centre's policy of TESTING aggressively, TRACKING comprehensively & TREATING efficiently.

Higher number of recoveries and declining mortality rate among COVID patients have shown that India's graded and pro-active strategies are delivering results on the field.
