

# As Recoveries in India grow, difference with Active Cases widens

## Recovered Patients are 3.5 times the Active Cases

Posted On: 26 AUG 2020 1:06PM by PIB Delhi

The number of recoveries in India today exceeds the active cases by **3.5** times.

The single day recovery figure has been more than 60,000 since many days. Recovery of **63,173** COVID-19 patients in the last 24 hours has resulted in the cumulative recoveries of **24,67,758** people. This has contributed to the rapidly widening chasm between the number of percentage recovered and percentage active cases further.

**17,60,489** people have recovered more than the active cases (**7,07,267**). With this, India's Recovery Rate amongst the COVID-19 patients has crossed 76% (**76.30%**) today.

The record high recoveries have ensured that the actual caseload of the country viz. the active cases, has further lowered. It currently comprises only **21.87%** of the total positive cases.

The coordinated efforts of Centre and State/UT governments of early detection through aggressive testing and efficient clinical management of hospitalized cases have shown results with continuously regressing Case Fatality Rate. It is **1.84%** as on date, and steadily declining.
