

India's maintains its high Recovery Rate: total Recoveries cross 27 lakh

Recovered Patients are more than 3.5 times the Active Cases

Posted On: 30 AUG 2020 2:08PM by PIB Delhi

With more patients recovering and being discharged from hospitals and home isolation (in case of mild and moderate cases), India's COVID-19 total recoveries have crossed **27 lakh** today. Recovery of **27,13,933** patients has been made possible because of effective implementation of the Centre conceived and led policy of TESTING aggressively, TRACKING comprehensively through timely surveillance of close contacts, & TREATING effectively through a widening medical care infrastructure across the country.

With the recovery of **64,935** cases in the last 24 hours, India's Recovery Rate amongst the COVID-19 patients has improved to **76.61%** and is demonstrating a continuous progress. The number of patients recovering is on a steady rise over the past several months.

The number of recoveries in India today exceeds the active cases by **3.55** times.

India has posted nearly 19.5 lakh (**19,48,631**) recoveries more than the active cases (**765302**, which are under active medical care). The record high recoveries have ensured that the actual caseload of the country viz. the active cases, continues to decline and currently comprises only **21.60%** of the total positive cases. This has aided the fast widening gap between the number of

patients recovered and the active cases.

Timely and effective clinical management of the patients in critical care through a slew of holistic measures has been instrumental in keeping the Case Fatality Rate low and on a steady downward trajectory. It has further dipped to **1.79%** today.
