India scales several unprecedented peaks

Active Caseload falls below 5 lakhs

Total Recoveries cross 80 lakhs, Cumulative Tests cross 12 crores

Posted On: 11 NOV 2020 11:58AM by PIB Delhi

India has crossed several landmark milestones in its collective fight against the global pandemic. The active caseload of India has fallen under the 5 lakh mark for the first time after 106 days. Today, the total burden of active cases is pegged at **4,94,657**. It was 4,96,988 on 28th July. With this, the Active Caseload stands at **5.73%** of the total positive cases.

This also indicates a sustained trend of declining active cases in the country. It assumes higher significance in the context of several countries across the globe reporting a surge in the number of new cases.

This landmark achievement has been made possible by the Centre's sustained, graded and targeted strategies, their effective implementation by the States/UTs, dedicated and selfless service of doctors and all other COVID-19 warriors.

27 States/UTs have less than 20,000 active cases.

27 States & UTs have less than 20,000 active cases

Just **8 States/UTs** have more than 20,000 cases; two states (Maharashtra and Kerala) have active cases more than 50,000.

8 States & UTs have more than 20,000 active cases

44,281 new cases have been reported in the last 24 hours while **50,326** active cases have recovered in this period. This is the 39th Day of daily recoveries exceeding the daily new cases.

Total Recoveries have thus also risen in the corresponding period along with the difference between Total Recoveries and Total Active Cases.

The Total Recoveries have crossed the 80L mark. The number of total recoveries as on date is **80,13,783**. The gap between Recovered cases and Active cases has widened **75,19,126**. The Recovery Rate has increased to **92.79%**.

Recovered cases cross 80 lakhs & Active cases under 5 lakhs

In another milestone, India has crossed **12 crore cumulative tests**. 11,53,294 tests have been conducted in the last 24 hours in the country.

The trend of daily low cases has been made possible by an exponential increase in the testing infrastructure.

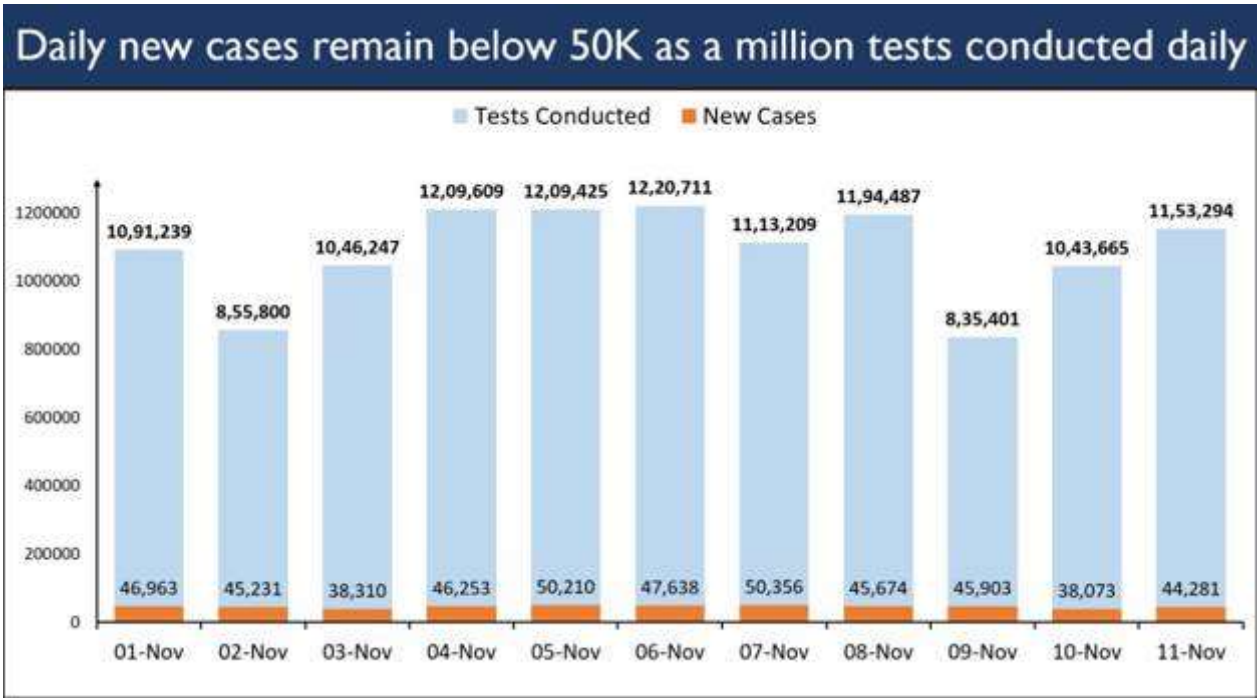

Exponential increase in testing infrastructure

High testing has aided in early identification of the infected population, thus preventing the transmission of the virus to the non-infected.

The New Daily cases continue to be less than 50,000.

77% of the new recovered cases are observed to be concentrated in 10 States/UTs.

Maharashtra has reported the maximum number of single day recoveries with 6,718 newly recovered cases closely followed by the 6,698 figure achieved by Kerala. They are followed by 6,157 recoveries in Delhi.

The top 10 States and UTs have reported 78% of the new cases.

Delhi has reported the highest daily new cases at 7,830. It is followed by Kerala with 6,010 cases.

Ten States/UTs account for **79%** of the COVID fatalities. **512** case fatalities have been reported in the past 24 hours. Total Case Fatality Rate stands at **1.48%** and continues its downwards trajectory.

Maharashtra saw the most casualties at 110. Delhi and West Bengal follows with 83 and 53 new deaths, respectively.
